1.	Subject	OBSTETRICAL CARE 3			
2.	Code	DA - 311			
3.	Study program:	Three-year professional studies for graduate obstetricians			
4.	Conducted by	UKIM – Medical faculty			
		Department of gynecology and obstetrics			
5.	Degree of	First cycle			
	education (first				
	or second cycle)				
6.	Academic	Second/V 7. Credits 11 – III semester			
	year/semester	and VI 10 – IV semester			
8.	Professor	Department Chair: Prof. Goran Dimitrov *all the professors from the Department of gynecology and obstetrics			
9.	Prerequisite	Passed exam Obstetrical care 2 and Obstetrics			
7.	ricicquisite	Pass all the exams in First year			
10.	Goals	The students:			
10.		- Enrich and gain new knowledge about the physiological changes in the			
		organism of a pregnant woman, a woman delivering a baby and in the			
		postnatal period			
		- Gain knowledge about the pathological conditions in pregnancy,			
		diseases that pregnancy can cause, chronic diseases and urgent			
		conditions in obstetrics			
		- Gain knowledge about conducting a normal delivery			
		- Learn the pathological conditions in the puerperium			
		- Learn the diagnostic and therapeutic program in pregnancy, in delivery			
		(preparing for examination, examination, therapy, surgical procedures)			
		Examinations during pregnancy for determining the condition of the fetus			
		(cytogenetics, ultrasound, CTG); screening tests			
		Learn the physiology and pathology of birth, physiology and pathology of			
		puerperium Cain have bedrachte dasse beziehenste bisth			
		Gain knowledge about conducting a home birth			
		Gain knowledge about procedures in case of abnormal presentation of the fetus			
		placenta disorders, umbilical cord and amniotic fluid, pre-term and post-term Gain knowledge about the basic obstetrical surgeries and interventions			
		Gain basic knowledge about the basic obsectively surgeries and interventions Gain basic knowledge about anesthesia during childbirth, analgesia			
		Learn to take care of a healthy newborn and a newborn with the need for			
		resuscitation after birth			
		Gain knowledge about an urgent delivery			
		- Expand and enrich their knowledge about the anatomy of female			
		reproductive organs and pelvis			
		- Expand and enrich their knowledge about the physiology of a female			
		organism and the reproductive system			
		- Enrich their knowledge about pathophysiology, clinical picture,			
		possible complications, diagnostic and therapy of gynecological			
		problems			
		- Gain knowledge about the care of patients and their reproductive and			
		gynecological health through:			
		- Advising the patient about obstetrical care, protecting the reproductive			
1		health: before conception, before delivery, during delivery, after			
		delivery and during menopause. Care for newborns, young babies that			

	are breastfed and preschoolers.				
	 Obstetrical care during heavy menstrual bleeding, development 				
	problems of the reproductive organs, illness of the pregnant woman,				
	sterilization, incontinence, sexually transmitted diseases, breast				
	disorders, after birth surgeries and hysterectomy.				
	- Obstetrical care of an infertile couple (infertility of the couple)				
11.	Content summary: 30+50 classes				
	Theoretical lessons:				
	Care of the sexual and reproductive health – 1 class				
	Sexual education – benefits and age categorization – 1 class				
	Development of female and male reproductive organs – 1 class				
	Menstrual cycle and menstrual disorders – 1 class				
	Polycystic ovary syndrome – 1 class				
	Endocrinology disorders which influence infertility – 2 classes				
	Abnormalities in the development of the genital organs -1 class				
	Sexually transmitted diseases – diagnosis and treatment – 1 class				
	Screening of breast tumors – 1 class				
	Urinary and anal incontinence – medical history, diagnosis and treatment – 1 class				
	Infertility – reasons – 1 class				
	Methods of assisted reproduction - 1 class				
	The role of the obstetrician in the infertility treatment team -1 class				
	Communication skills with pregnant patients – 1 class				
	Communication skills with patient who undergo an infertility treatment -1 class				
	Primary ovarian insufficiency – 1 class				
	Sterilization – male and female – 1 class				
	Obstetrical law regulation in The Republic of North Macedonia - 1 class				
	Obstetrical education in The Republic of North Macedonia – 1 class				
	Traditional and contemporary obstetrical methods – 2 classes				
	Specific role of the obstetrician in the antenatal period -2 classes				
	Symptoms, signs and medical history of possible pregnancy – 1 class				
	Antenatal detection of risk factors – 1 class				
	Consultations of a pregnant woman – 1 class				
	Nutrition of a pregnant woman – 1 class				
	Physiotherapy exercises for pregnant women -2 classes				
	Infectious diseases in pregnancy – 1 class				
	Comorbidities and their influence on pregnancy -1 class				
	Early pregnancy with unknown location – 1 class				
	Genetic counseling and analysis in pregnancy – 1 class				
	Recurrent pregnancy loss – psychosocial and medical approach – 1 class				
	Abnormalities in the placenta development – 1 class				
	Complications related to the placenta -1 class				
	Disorders with the amniotic fluid and amniotic membranes – 1 class				
	Umbilical cord prolapse and descent – 1 class				
	Risk in multiple pregnancy – 1 class				
	Managing pregnancy in case of intrauterine fetal growth restriction – 1 class				
	Managing pregnancies with premature rupture of membranes – 1 class				
	Managing pregnancies with hypertensive disorders – 1 class				
	Fetal lung development and neuro-protection - 1 class				
	Rational drug use in pregnancy - 1 class				
	Invasive diagnostic and treatment of the fetus - 1 class				
	Management of diabetic pregnant women - 1 class				

Psychosocial and medical treatment of patient with neuro-psychiatric disorders - 1 class Managing patients with internal diseases - 1 class Managing patient with previous surgical interventions and diseases - 1 class Admitting and treatment of patients in the peripartal intensive care -2 classes Invasive and non-invasive examinations in high-risk pregnancies - 1 class Prolonged pregnancy - monitoring and treatment - 1 class Admitting and preparing the patient in the birth room - 1 class Procedures with a patient during the I birth time - 1 class Cardiotocograph results and their interpretation - 1 class Partogram – proper monitoring and benefits - 1 class Observation and active participation in delivery in I birth time - 1 class Management of preterm delivery - 1 class Managing a delivery of patient with disabilities - 1 class Normal and prolonged II birth time - 1 class Delivering a patient with an infectious disease (hepatitis, HIV) - 1 class Internal and external rotation of the fetus - 1 class Active participation in III birth time - 1 class Uterine inversion and rupture - 1 class Diagnosis and treatment of primary postpartum hemorrhage - 1 class Uterine tamponade and postpartum hysterectomy - 1 class Absolute and relative indications and contraindications of a surgical delivery - 1 class Absolute and relative indications of ending the delivery with a c-section -1 class Urgent interventions during delivery - 1 class Intensive care of a patient with high-risk pregnancy after delivery - 1 class Intensive care of a fetus in distress - 1 class Dealing with complications caused by obstetrical anesthesia and analgesia - 1 class Noticing and treating complications in puerperium - 1 class Delivering news about negative perinatal results - 1 class Psychosocial and legal support of the obstetrician and other health professionals - 1 class Care of patients and their reproductive and gynecological health Advising the patient about obstetrical care, protecting the reproductive health: before conception, before delivery, during delivery, after delivery and during menopause. Care for newborns, young babies that are breastfed and preschoolers. Obstetrical care during heavy menstrual bleeding, development problems of the reproductive organs, illness of the pregnant woman, sterilization, incontinence, sexually transmitted diseases, breast disorders, after birth surgeries and hysterectomy. Obstetrical care of an infertile couple (infertility of the couple) Analysis in pregnancy for evaluating the condition of the fetus (ultrasound, CTG); screening tests Pre-term and post-term Birth surgeries Obstetrical anesthesia, analgesia _ Care of the newborn during delivery Urgent delivery **Practical lessons:** -Advising pregnant women with 50 prenatal examinations -Obstetrical care and attending 25 normal spontaneous deliveries -The student must perform 25 deliveries and to actively participate and assist in at least 20 deliveries -Active participation – assisting during breech delivery, practice on a doll model -Performing episiotomy and suture of the wound and in small vaginal laceration, may be on a doll

	model							
	-Obstetrical care of 25 high-risk pregnancies or taking care of a healthy woman during delivery or							
	taking care of the newborn							
			cal condi	tions in gynecology	and obstetrics			
	-Obstetrical care of patients with pathological conditions in gynecology and obstetrics -Elementary knowledge of medicine and surgery which includes theory and practice							
	-Preparing standards of obstetrical/health care Specialized obstetrical/health care: check-in, transfer, patient discharge, psycho-physical problems							
	due to the hospitalization, hospital environment, preoperative preparation of the patient and helping							
	the vitally endangered patients							
	Participation of the obstetrician in the diagnostic and therapeutic program Specialized preparation of the obstetrician for dealing with patients with infectious diseases, internal
